

Year 2 Science Assessment

Predicting: Ask simple questions and think about what might happen Planning/Experimenting: Perform and plan a simple test to find things out Observing/Measuring: Make observations and measure things carefully Data Handling/Recording: Gather and record information (data) in different ways Concluding: Explain what you found out and use observations to suggest answers to questions Identification/Classification: Sort things into different groups (including living and non living things) Living things and their habitats I can compare the differences between things that are living, dead, and things that have never been alive. I know that most living things live in habitats that are suited to them. I can describe how different habitats provide for the basic needs of different kinds of animals and plants. I understand that plants and animals depend on each other. I can identify and name different plants and animals that live in specific habitats, including micro-habitats. I can describe how animals get their food from plants and other animals using the idea of a simple food chain. Plants I can explain how plants need water, light and the right temperature to grow and stay healthy. Animals including humans I can understand that animals, including humans, have offspring (babies) which grow into adults. I can know that animals, including humans, need water, food and air to survive. I know how important it is for humans to exercise. I understand that humans should have a balanced diet and eat the correct amounts of food. I know the importance of hygiene (being clean). Uses of everyday materials I can explore how the shapes of some solid objects can be changed by	Pupil	Working Scientifically	Teacher
